Homework 11

Due Date .... March 2, 2023
Name .... **Blake Raphael**
Student ID **109752312**
Collaborators .... **Alex Barry and Brody Cyphers**

Contents

1 Instructions

- The solutions **should be typed**, using proper mathematical notation. We cannot accept hand-written solutions. Here's a short intro to LaTeX.

- You should submit your work through the **class Gradescope page** only (linked from Canvas). Please submit one PDF file, compiled using this LaTeX template.

- You may not need a full page for your solutions; pagebreaks are there to help Gradescope automatically find where each problem is. Even if you do not attempt every problem, please submit this document with no fewer pages than the blank template (or Gradescope has issues with it).

- You are welcome and encouraged to collaborate with your classmates, as well as consult outside resources. You must **cite your sources in this document. Copying from any source is an Honor Code violation. Furthermore, all submissions must be in your own words and reflect your understanding of the material.** If there is any confusion about this policy, it is your responsibility to clarify before the due date.

- Posting to **any** service including, but not limited to Chegg, Reddit, StackExchange, etc., for help on an assignment is a violation of the Honor Code.

- You **must** virtually sign the Honor Code (see Section 2). Failure to do so will result in your assignment not being graded.

2 Honor Code (Make Sure to Virtually Sign)

- My submission is in my own words and reflects my understanding of the material.

- Any collaborations and external sources have been clearly cited in this document.

- I have not posted to external services including, but not limited to Chegg, Reddit, StackExchange, etc.

- I have neither copied nor provided others solutions they can copy.

Agreed (I agree to the above, Blake Raphael). □

3 Standard 11 - Asymptotics I (Calculus I techniques)

Problem 1. For each part, you will be given a list of functions. Your goal is to order the functions from **slowest growing** to **fastest growing**. That is, if your answer is $f_1(n), \ldots, f_k(n)$, then it should be the case that $f_i(n) \leq O(f_{i+1}(n))$ for all i. If two adjacent functions have the same order of growth (that is, $f_i(n) = \Theta(f_{i+1}(n))$), clearly specify this. **Show all work, including Calculus details.** Plugging into WolframAlpha is not sufficient.

You may find the following helpful.

- Recall that our asymptotic relations are transitive. So if $f(n) \leq O(g(n))$ and $g(n) \leq O(h(n))$, then $f(n) \leq O(h(n))$. The same applies for little-o, Big-Theta, etc. Note that the goal is to order the growth rates, so transitivity is very helpful. We encourage you to make use of transitivity rather than comparing all possible pairs of functions, as using transitivity will make your life easier.

- You may also use the Limit Comparison Test. However, you **MUST** show all limit computations at the same level of detail as in Calculus I-II. Should you choose to use Calculus tools, whether you use them correctly will count towards your score.

- You may **NOT** use heuristic arguments, such as comparing degrees of polynomials or identifying the "high order term" in the function.

- If it is the case that $g(n) = c \cdot f(n)$ for some constant c, you may conclude that $f(n) = \Theta(g(n))$ without using Calculus tools. You must clearly identify the constant c (with any supporting work necessary to identify the constant- such as exponent or logarithm rules) and include a sentence to justify your reasoning.

You may also find it helpful to order the functions using an `itemize` block, with the work following the end of the `itemize` block.

- This function grows the slowest: $f_1(n)$

- These functions grow at the same asymptotic rate and faster than $f_1(n)$: $f_2(n), f_3(n), \ldots$

- These functions grow at the same asymptotic rate, but faster than $f_2(n)$: $f_k(n)$.

Also below is an example of an `align` block to help you organize your work.

$$\lim_{n \to \infty} \frac{n^2}{2^n} = \lim_{n \to \infty} \frac{2n}{\ln(2) \cdot 2^n}$$
$$= \lim_{n \to \infty} \frac{2}{(\ln(2))^2 \cdot 2^n}$$
$$= 0.$$

3.1 Problem 1(a) (2 points)

(a) $n^2 + 2n$, $\qquad 100n + 100$, $\qquad n^3 - 10n^2$, $\qquad \frac{n^2}{\sqrt{n}}$.

Proof.

$$\lim_{n\to\infty} \frac{100n + 100}{n^2 + 2n} = \lim_{n\to\infty} \frac{\frac{100}{n} + \frac{100}{n^2}}{1 + \frac{2}{n}}$$
$$= \frac{\lim_{n\to\infty} \frac{100}{n} + \frac{100}{n^2}}{\lim_{n\to\infty} 1 + \frac{2}{n}}$$
$$= \frac{0}{1}$$
$$= 0.$$

So $100n + 100 \in O(n^2 + 2n)$

$$\lim_{n\to\infty} \frac{n^2 + 2n}{n^3 - 10n^2} = \lim_{n\to\infty} \frac{\frac{1}{n} + \frac{2}{n^2}}{1 - \frac{10}{n}}$$
$$= \frac{\lim_{n\to\infty} \frac{1}{n} + \frac{2}{n^2}}{\lim_{n\to\infty} 1 - \frac{10}{n}}$$
$$= \frac{0}{1}$$
$$= 0.$$

So $n^2 + 2n \in O(n^2 - 10n^2)$ and by transitivity, $100n + 100 \in O(n^3 - 10n^2)$

$$\lim_{n\to\infty} \frac{\frac{n^2}{\sqrt{n}}}{n^2 + 2n} = \lim_{n\to\infty} \frac{\sqrt{n}}{n + 2}$$
$$= \lim_{n\to\infty} \frac{\frac{1}{\sqrt{n}}}{1 + \frac{2}{n}}$$
$$= \frac{\lim_{n\to\infty} \frac{1}{\sqrt{n}}}{\lim_{n\to\infty} 1 + \frac{2}{n}}$$
$$= \frac{0}{1}$$
$$= 0.$$

So $\frac{n^2}{\sqrt{n}} \in O(n^2 - 2n)$ and by transitivity, $\frac{n^2}{\sqrt{n}} \in O(n^3 - 10n^2)$

- This function grows the slowest: $100n + 100$
- These functions grow at the same asymptotic rate and faster than $100n + 100$: $n^2 + 2n, \frac{n^2}{\sqrt{n}}$
- This function grows faster than $n^2 + 2n$: $n^3 - 10n^2$.

$\square$

3.2 Problem 1(b) (2 points)

(b) $(\log_2 n)^7, \qquad 10\log_3 n, \qquad \log_4(n^7), \qquad n^{1/1000}.$

Hint: Recall change of logarithmic base formula $\log_a x = \log_b x \cdot \log_a b$

Answer.

$$\begin{aligned}
\lim_{n\to\infty} \frac{\log_2(n)^7}{n^{1/1000}} &= \lim_{n\to\infty} \frac{n^{-1/1000}\log(n)^7}{\log(2)^7} \\
&= \frac{1}{\log(2)^7} \lim_{n\to\infty} n^{-1/1000}\log(n)^7 \\
&= \frac{1}{\log(2)^7} \cdot 0 \\
&= 0.
\end{aligned}$$

So $\log_2(n)^7 \in O(n^{1/1000})$.

$$\begin{aligned}
\lim_{n\to\infty} \frac{10\log_3(n)}{\log_2(n)^7} &= \lim_{n\to\infty} \frac{10\log(2)^7}{\log(3)\log(n)^6} \\
&= \frac{10\log(2)^7 \lim_{n\to\infty}\frac{1}{\log(n)^6}}{\log(3)} \\
&= \frac{10\log(2)^7}{\log(3)} \frac{1}{\lim_{n\to\infty}\log(n)^6} \\
&= \frac{10\log(2)^7}{\log(3)\lim_{n\to\infty}\log(n)^6} \\
&= \frac{0}{\infty} \\
&= 0
\end{aligned}$$

So $10\log_3(n) \in O(\log_2(n)^7)$ and by transitivity, $10\log_3(n) \in O(n^{1/1000})$

$$\begin{aligned}
\lim_{n\to\infty} \frac{\log_4(n^7)}{10\log_3(n)} &= \lim_{n\to\infty} \frac{\log(3)\log(n^7)}{10\log(4)log(n)} \\
&= \frac{\log(3)}{10\log(4)} \lim_{n\to\infty} \frac{7\log(n)}{\log(n)} \\
&= \frac{\log(3)(7)}{10\log(4)}
\end{aligned}$$

Since we got a constant, $\log_4(n^7) \in \theta(10\log_3(n))$ and by transitivity, that means $\log_4(n^7) \in O(\log_2(n)^7)$ and $\log_4(n^7) \in O(n^{1/1000})$.

- These functions grow the slowest but at the same rate: $10\log_3(n), \log_4(n^7)$.
- This function grows faster than $10\log_3(n), \log_4(n^7)$: $\log_2(n)^7$
- This function grows faster than $\log_2(n)^7$: $n^{1/1000}$.

$\square$
